

Abortion is **not** your only choice. We get it. This is hard. But you don't have to decide anything today. **It is risky to make a final, life-changing decision without all the facts and alternatives.** Don't give into the pressure from those who want to make money off your body.

Just breathe. There is time to consider. We can help you without cost or coercion. Let's just talk about what your hopes and goals are and how we can help you get there. We can connect you with resources for real choices and provide someone to walk with you during this challenging time.

FREE & CONFIDENTIAL

- Pregnancy testing
- Ultrasound
- Medical support
- Counseling

Remember, you do not have to decide today.

Let's just talk first.

ABORTION PILL REVERSAL

Did you just take the abortion pill? **Maybe you are having second thoughts.** If you have taken the first dose of the abortion pill (**Mifepristone, Mifeprex or RU-486**) and you feel uneasy about your decision and want to change your mind, we can help you! **It may not be too late.**

There is an effective process called **ABORTION PILL REVERSAL (APR)** that can reverse the effects of chemical abortion and allow you to bring your baby to term. Initial studies show that APR has a 64-68% success rate.

Many women change their minds about their chemical abortion. **IT MAY NOT BE TOO LATE.** **Contact one of our medical professionals who can guide you towards reversing the effects of the abortion pill.** We will help you every step of the way.

**CALL OUR 24/7 HELPLINE:
(877) 558-0333**

POST-ABORTION HELP

(Project Rachel)

If you or someone you know is struggling after abortion, please call **(703) 841-2504**. All inquiries are confidential. For more information, please go to: www.helpafterabortion.org.

DID YOU KNOW?

ONE WEEK after you miss your first period, your baby's developing heart starts to beat.

TWO WEEKS after your missed period, your baby's body systems are present and developing, including the blood circulatory system, the digestive track, nervous system, reproductive and urinary tracts and kidneys.

By the time you miss your **SECOND PERIOD**, your baby's brain is divided into 3 parts—one to experience emotion and understand language, one for hearing and one for seeing.

By the time you miss your **THIRD PERIOD**, your baby is well-proportioned, and about the size of your thumb. Every organ is present. The liver is making blood, the kidneys function, the heart beats steadily.
